

Serial No. 10/034,409  
Response dated December 12, 2005  
Reply to Office Action of August 12, 2005

Attorney Docket No. PF02246NA

**Amendments to the Claims:**

1. (Currently Amended) In a communication system, the communication system adapted to provide real-time communication service to a plurality of subscribers, a method for providing status information associated with a plurality of users comprising:

providing a plurality of logon identifiers for a device associated with a first subscriber, each of the plurality of logon identifiers corresponding to one of the plurality of users utilizing the device so that the plurality of users access real-time communication service via the first subscriber;

monitoring status associated with the plurality of logon identifiers of the device to provide status information; and

transmitting the status information associated with one of the plurality of logon identifiers, unavailable to participate in real-time communication, to a second subscriber, the second subscriber having a contact list including the one of the plurality of logon identifiers.

2. (Original) The method of claim 1, wherein the step providing a plurality of logon identifiers associated with a first subscriber comprises providing one of a first name, a last name, a persona, an IP address, and a port number corresponding to one of the plurality of users.

3. (Original) The method of claim 1, wherein the step of monitoring status associated with the plurality of logon identifiers to provide status information comprises monitoring status associated with one of a first name, a last name, a persona, an IP address, and a port number to provide status information.

4. (Original) The method of claim 1, wherein the step of monitoring status associated with the plurality of logon identifiers to provide status information comprises monitoring status associated with the plurality of logon identifiers to provide status information based on a registration.

5. (Original) The method of claim 1, wherein the step of monitoring status associated with the plurality of logon identifiers to provide status information comprises monitoring status associated with the plurality of logon identifiers to provide status information based on a user input via one of an alphanumeric keypad, a numeric keypad, a touch-sensitive display and a microphone.

6. (Currently Amended) The method of claim 1, wherein the step of monitoring status associated with a plurality of logon identifiers to provide status information comprises monitoring status associated with a plurality of logon identifiers to provide information indicating a nearby status of a user, wherein the user is not currently participating in real-time communication but may become available to participate in real-time communication.

7. (Original) The method of claim 1, wherein the step of monitoring status associated with the plurality of logon identifiers to provide status information comprises monitoring status associated with a plurality of logon identifiers from a wireless device to provide status information, and wherein the wireless device comprises one a cellular telephone, a pager, and an electronic planner.

8. (Currently Amended) The method of claim 1, wherein the step of transmitting the status information associated with one of the plurality of logon identifiers to a second subscriber comprises transmitting information indicating a nearby status of a user to a second subscriber, wherein the user is not currently participating in real-time communication but may become available to participate in real-time communication.

9. (Original) The method of claim 1, wherein the communication system is adapted to provide one of instant messaging service and group chat service to the plurality of subscribers.

10. (Currently Amended) In a communication system, the communication system adapted to provide real-time communication service to a plurality of subscribers, wherein an apparatus is adapted to provide status information associated with a plurality of users, the apparatus comprising;

a memory;

a processor operatively coupled to the memory, the processor being operable to provide a plurality of logon identifiers for a device associated with a first subscriber;

the processor being operable to monitor status associated with the plurality of logon identifiers to provide status information; and

the processor being operable to transmit the status information associated with one of the plurality of logon identifiers, unavailable to participate in real-time communication, to a second subscriber having a contact list including the one of the plurality of logon identifiers,

wherein each of the plurality of logon identifiers corresponds to one of the plurality of users utilizing the device so that the plurality of users access real-time communication service via the first subscriber.

11. (Original) The apparatus of claim 10, wherein the communication system is adapted to provide one of instant messaging service and group chat service to the plurality of subscribers.

12. (Original) The apparatus of claim 10, wherein the controller comprises a controller operable to monitor status associated with the plurality of logon identifiers to provide status information based on a registration.

13. (Original) The apparatus of claim 10, wherein the controller comprises a controller operable to monitor status associated with the plurality of logon identifiers to provide status information based on a user input via one of an alphanumeric keypad, a numeric keypad, a touch-sensitive display and a microphone.

14. (Original) The apparatus of claim 10, wherein the plurality of logon identifiers comprises one of a first name, a last name, a persona, an IP address, and a port number corresponding to one of the plurality of users.

15. (Currently Amended) The apparatus of claim 10, wherein the status information comprises information indicating a nearby status of a user, wherein the user is not currently participating in real-time communication but may become available to participate in real-time communication.

16. (Original) The apparatus of claim 10, wherein the status information comprises status information associated with one of a first name, a last name, a persona, an IP address, and a port number corresponding to one of the plurality of users.

17. (Original) The apparatus of claim 10, wherein the apparatus comprises one of a cellular telephone, a pager, an electronic planner, and a communication network.

19. (Currently Amended) In a communication system adapted to provide real-time communication service to a plurality of subscribers, wherein a controller operates in accordance with a computer program embodied on a computer-readable medium for providing status information associated with a plurality of users, the computer program comprising:

a first routine that directs the controller to provide a plurality of logon identifiers for a device associated with a first subscriber, each of the plurality of logon identifiers corresponding to one of the plurality of users utilizing the device so that the plurality of users access real-time communication service via the first subscriber;

a second routine that directs the controller to monitor status associated with the plurality of logon identifiers to provide status information; and

a third routine that directs the controller to transmit the status information associated with one of the plurality of logon identifiers, unavailable to participate in real-time communication, to a second subscriber, the second subscriber having a contact list including the one of the plurality of logon identifiers.

20. (Original) The computer program of claim 19, wherein the first routine comprises a routine that directs the controller to provide one of a first name, a last name, a persona, an IP address, and a port number corresponding to one of a plurality of users.

21. (Original) The computer program of claim 19, wherein the second routine comprises a routine that directs the controller to monitor status associated with one of a first name, a last name, a persona, an IP address, and a port number to provide status information.

22. (Original) The computer program of claim 19, wherein the second routine comprises a routine that directs the controller to monitor status associated with the plurality of logon identifiers to provide status information based on a registration.

23. (Original) The computer program of claim 19, wherein the second routine comprises a routine that directs the controller to monitor status associated with the plurality of logon identifiers to provide status information based on a user input via one of an alphanumeric keypad, a numeric keypad, a touch-sensitive display and a microphone.

24. (Currently Amended) The computer program of claim 19, wherein the second routine comprises a routine that directs the controller to monitor status associated with a plurality of logon identifiers to provide information indicating a nearby status of a user, wherein the user is not currently participating in real-time communication but may become available to participate in real-time communication.

25. (Original) The computer program of claim 19, wherein the second routine comprises a routine that directs the controller to monitor status associated with a plurality of logon identifiers from a wireless device to provide status information, and wherein the wireless device comprises one a cellular telephone, a pager, and an electronic planner.

26. (Currently Amended) The computer program of claim 19, wherein the third routine comprises a routine that directs the controller to transmit information indicating a nearby status of a user associated with one of the plurality of logon identifiers to a second subscriber having a contact list including the one of the plurality of logon identifiers, wherein the user is not currently participating in real-time communication but may become available to participate in real-time communication.

27. (Original) The computer program of claim 19, wherein the communication system is adapted to provide one of instant messaging service and group chat service to the plurality of subscribers.

28. (Original) The computer program of claim 19, wherein the medium comprises one of paper, a programmable gate array, application specific integrated circuit, erasable programmable read only memory, read only memory, random access memory, magnetic media, and optical media.

29. (Previously Presented) The method of claim 1 wherein providing a plurality of logon identifiers associated with a first subscriber, further comprises providing a plurality of logon identifier, each of the plurality of logon identifiers corresponding to one of a plurality of natural persons.
